

Homework 11

Continue developing your Volcano NFT project

1. Add a function that allows a user to mint an NFT if they pay 0.01 ETH, or an amount of Volcano coin (decide on a price yourself).
2. Make sure that when a token is minted we can specify a token URI - a location where we can store metadata / images for the NFT.
3. What would be the problem with providing a function to allow us to change the token URI ?
4. Review the notes about the EVM in Lesson 5 in preparation for tomorrow's lesson about gas optimisation.
